

INDUSTRIAL PLANNING: S&OP

- *Statement :*

You work on the production plan of a product family in your company. You perform the plan for the 8 following months.

The strategy of the company concerning production is to have a constant production every month.

You have an opening stock of 300 and you want to have an inventory equivalent to 2 months of sales at the end of the last month.

You have the sales forecasts for the 8 months.

- *Questions :*

Complete the production plan and the planned inventory for each month.

INDUSTRIAL PLANNING: MPS AND MRP

Statement :

In the previous family of product, consider the product A which has several components: a sub-assembly B and a part C. B is made with 2 D and 1 E.

We need:

- 1 week to manufacture product A with a lot size of 200
- 1 week to assemble B with a lot size of 100
- 2 weeks to manufacture C with a lot size of 400

D and E are purchased parts with a procurement lead time of 2 weeks, both of these parts have a lot size of 400.

1. We are in W5 want to perform the MPS from weeks 9 to 13 (March).

The safety stock is 20 and the opening inventory is 150.

	W9	W10	W11	W12	W13
Sales forecast	5	30	70	85	100
Firm orders	95	65	30	10	0
Projected available stock					
MPS (receipt)					
MPS (release)					

2. Perform the MRP to meet the production plan for product A. Note that you already have a production receipt planned in W7 for product A.

Item	B	C	D	E
Stock	310	250	190	210
